

RoHS Compliant Product
A suffix of "-C" specifies halogen and lead-free

DESCRIPTION

The SRSS6376B33M are a group of positive voltage regulators manufactured by CMOS technologies with low power consumption and low dropout voltage, which provide large output currents even when the difference of the input-out-put voltage is small.

The SRSS6376B33M can deliver 300mA output current and allow an input voltage as high as 28V.

It's very suitable for the battery powered equipment, such as RF applications and other systems requiring a quiet voltage source.

FEATURES

- Low Quiescent Current: 2 μ A
- Operating Voltage Range: 2.5V~28V
- Output Current: 300mA
- Low Dropout Voltage: 200mV@100mA($V_{OUT}=3.3V$)
- Output Voltage: 1.2~12V
- High Power Supply Rejection Ratio: 70dB@1kHz
- Low Output Noise: 27x V_{OUT} μ V_{RMS} (10Hz~100kHz)
- Excellent Line and Load Transient Response
- Built-in Current Limiter, Short-Circuit Protection
- Over-Temperature Protection

Notes:

- Stresses beyond those listed under absolute maximum ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under recommended operating conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- All voltages are with respect to network ground terminal.
- This IC includes over temperature protection that is intended to protect the device during momentary overload. Junction temperature will exceed 125°C when over temperature protection is active. Continuous operation above the specified maximum operating junction temperature may impair device reliability.
- V_{dif} : The Difference Of Output Voltage And Input Voltage When Input Voltage Is Decreased Gradually Till Output Voltage Equals To 98% Of V_{OUT} (E).
