## DESCRIPTION

The SM86XX series are a group of positive voltage regulators manufactured by CMOS technologies with low power consumption and low dropout voltage, which provide large output currents even when the difference of the input-output voltage is small.

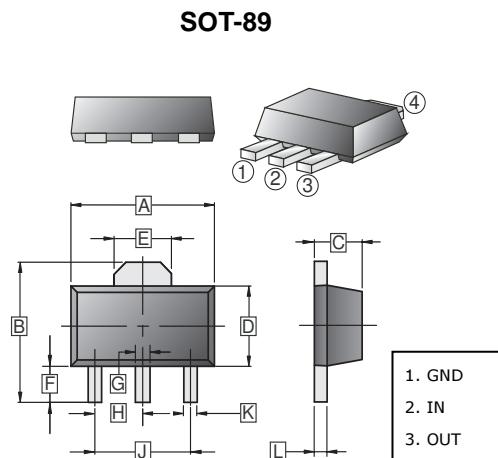

The SM86XX series can deliver 250mA output current and allow an input voltage as high as 45V. The series are very suitable for the battery powered equipment, such as RF applications and other systems requiring a quiet voltage source.

## FEATURES

- Internal Short-Circuit Current Limiting
- Internal Thermal Overload Protection
- No External Components Required

Operating Ambient Temperature	$T_A$	-40~85	$^\circ\text{C}$
Lead Temperature(Soldering, 10 sec)	$T_{solder}$	260	
Operating Junction Temperature Range <sup>3</sup>	$T_J$	-40~125	
Storage Temperature Range	$T_{STG}$	-40~125	

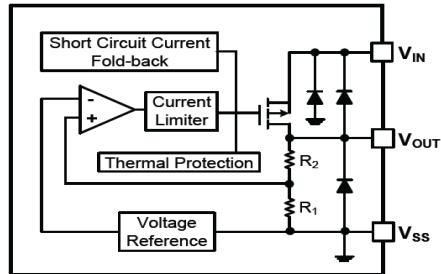

Notes:

1. Stresses beyond those listed under absolute maximum ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under recommended operating conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
2. All voltages are with respect to network ground terminal.
3. This IC includes over temperature protection that is intended to protect the device during momentary overload. Junction temperature will exceed 125°C when over temperature protection is active. Continuous operation above the specified maximum operating junction temperature may impair device reliability.
