

RoHS Compliant Product
A suffix of "-C" specifies halogen and lead-free

DESCRIPTION

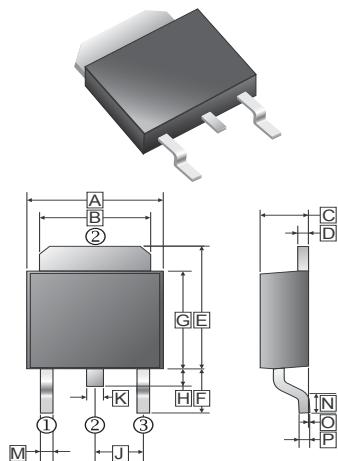

The SJ78M05 series of three-terminal positive regulators are available in the TO-252 package and with 5Vfixed output voltage, making it useful in a wide range of applications.

This regulator can provide local on-card regulation, eliminating the distribution problems associated with single point regulation. It employs internal current limiting, thermal shut-down and safe operating area protection, making it essentially indestructible. If adequate heat sinking is provided, they can deliver over 0.5A output current. Although designed primarily as fixed voltage regulators, these devices can be used with external components to obtain adjustable voltages and currents.
